

“HawkPoint Technologies was the perfect IT solution for our organization. They offered solutions/support for all of our IT needs-hardware, networks, daily support with a Help Desk, multi-location connectivity, etc.” – Nancy Seidler, Controller of Kurz industrial Solutions

Managed Services offers scalable solutions to help simplify your network operations. We focus on traditional disciplines of network management – device monitoring, performance reporting, fault and change management and configuration back-up – providing an attractive alternative to expending the funds and manpower to perform the work in-house. HawkPoint Technologies’ I.T. team of support personnel and administrators has the training and experience needed to keep your systems optimized and available for when you need them to work. From proactive management to help desk support to planning and budgeting, we have you covered.
